

KEYS TO THE VAULT

WHAT DOES IT TAKE TO BE INCLUDED IN THE VAULT?

GOOD GAMES

These games aren't just slideshows or quizzes with sound effects. They use the affordances of interactivity to scaffold player understanding and create cycles of mastery.

FREE.

These games are capital-f Free. Not just free of charge: **no subscriptions, no licenses**, and **no ads**. Selling another version of the game is fine, but not in the version on Vault.

NO LOGINS

These games can be played without a **login**. No registration, and no logins.

EDUCATIONAL.

These games truthfully represent their subject matter. They target learning in topics that are taught in school, ideally specific standards.

TO THE POINT

These games deliver some learning value within a single class period. Long games are great, but don't bury the lede: players shouldn't have to play for hours before they learn something.

ON THE WEB

These games are accessible through a browser and don't require any downloads. The robust standards of HTML5 ensure cross-platform compatibility and years of ongoing support. Downloads, even browser extensions, are a technical hurdle in the classroom.

PLAY ON CHROMEBOOKS

These games are available and performant on Chromebooks, the devices most often distributed to students. They needn't be the smoothest or most beautiful on budget hardware, but they must achieve a reasonable standard of stability.
